
Delphi Installshield Download [REPACK]

I know this may have been asked many times, but please someone answer anyway! How can I install, say, an ODBC driver for SQL Server using Installshield? Each installer takes about 25 seconds, which I can't use in my business scenarios. I can install and remove applications or packages through the console. I really need your help! Many thanks. I think I have a solution. If you want to install an ODBC driver, you need to create an INI file. You need to put the following code in the INI file you are using. Note that you can put the code in any INI file.
